

SAFER RIGGING AT HEIGHT WITH SKYTRUSS TENSION WIRE GRID

Working at height on trussing has always been a slow and potentially risky business. Show technicians are often impeded by the use of harnesses and dual lanyards. Getting from one side of the rig to the other can require an awkward and knee-skinning crawl.

TRUSS MOUNTED TENSION WIRE GRID SYSTEM PROVIDES FLEXIBLE AND TRANSPORTABLE OPTIONS

InterAmerica Stage in concert with TOMCAT USA introduces a truss-mounted wire tension grid system. A near standard truss grid is transformed into a safe working platform that is a perfect floor for riggers and technicians to work from. It can be outfitted complete with handrails and safety gates as required.

Sky Truss and SkyDeck panels are modular which makes them ideal for touring shows.

Imagine having the ability to set up a working grid, a lighting bridge or an access catwalk in any venues
...now that's cool
